Feedbacks

The visit to the OT to watch skin graft and wound dressing procedures also the close interaction with the clinicians who were so kid, generous with knowledge sharing. Overall it has been a truly amazing, inspiring experience. The lectures the presentation by Dr Sen and above all the interaction with the team so special.

Takeaway is that there is enormous scope and possibilities in the field of wound management BUT not all clinicians out there are as gracious, open minded and forward thinking as this wonderful team that have kindly interacted with us this weekend. Getting into wound dressings and devices is a costly business and funding and support is critical to bringing new concepts to the market.

Conduct of the program was well planned. There was a balance between clinical visits and lectures, this was useful and could help in assimilating lot of information on a short span of time.

Now WE GOT SUCH A GREAT KNOWLEDGE HOW WE CAN USE OR HOW TO APPLY OUR KNOWLEDGE IN OUR PRODUCTS WHICH WE LEARNT IN THE WORKSHOP.

This bootcamp has been very impressive and helpful. It has given me more ideas to think upon and understand how my product can be modified to fit the needs of the clinician. Moreover the insights into the current developments and their limitation's have given enough food for thought. Overall it has been a great experience and looking forward for more such boot camps in other fields such as stem cells and the associated product needs.

I am looking forward to more bootcamps being organised covering other areas such as osteoarthritis, biological entity based products and nanomedicine which are emerging fields but still limited by good products and difficulties linked with regulator issues.
